Education

National Institute of Technology, Tiruchirappalli, India

Nov. 2021 – May 2025

Bachelor of Technology (B.Tech.) in Computer Science and Engineering

Experience

ACG Inspection – Hyderabad, India

Jun. 2025 – Present

Software Developer

- Authored approximately **80% of all unit test cases** across multiple modules on the ALSC L4 Cloud Project, taking full ownership of test coverage for both frontend and backend layers.
- Led the Audit Trail module end-to-end through design, development, and performance optimization; spearheaded the **Serial Number Generation module** by delivering three critical functional components.
- Diagnosed and resolved a high volume of critical defects across frontend, backend, and database layers, consistently identifying root causes with speed and precision.
- Championed code-quality standards by rolling out **ESLint** and **Prettier** across the entire codebase, improving readability and reducing lint-related review cycles.

WorldQuant – Remote

Sep. 2023 – May 2025

Research Consultant

- Formulated quantitative trading strategies through independent analysis of historical market data, price signals, and macro trends.
- Elevated predictive accuracy by **30%** by detecting regime shifts and applying advanced statistical learning techniques to alpha signals.
- Engineered end-to-end pipelines covering data preprocessing, feature engineering, and model evaluation to validate and deploy trading models.

Exposys Data Labs – Bengaluru, Karnataka

May 2024 – Jul. 2024

Software Developer Intern

- Architected a real-time chat application using Socket.io achieving sub-50ms latency and supporting **500+ concurrent users**.
- Secured the platform with JWT-based authentication and authorization, cutting unauthorized login attempts by **90%**.
- Refactored React components and state management logic, slashing page load time by **2.3 seconds** and improving responsiveness by **30%**.

Projects

Online Learning Platform

- Constructed a full-stack e-learning platform with role-based access control (Admin/Instructor/Student), secure content delivery, and video streaming via AWS S3, reducing buffering time by **40%**.
- Shipped enrollment, progress tracking, and quiz modules that increased learner completion rates by **55%**.
- Designed scalable REST APIs with Node.js and Express, cutting server response time by **30%** under peak load.

Cloud-Hosted IoT Dashboard

- Delivered a real-time IoT monitoring dashboard rendering sensor data with sub-200ms latency using React and live charting libraries.
- Integrated DynamoDB with TTL-based cleanup for device metrics, lowering storage costs by **35%**.
- Boosted data visibility and user engagement by **60%** through interactive live chart components.

Credit Card Fraud Detection

- Trained a fraud classification model in Python using logistic regression on highly imbalanced transaction datasets.
- Transformed raw data via feature engineering, null imputation, and stratified train/test splits to maximize model reliability.
- Conducted anomaly detection analysis that improved model robustness and reduced false-negative fraud classifications.

Certificates

- **Software Engineer Certificate** – HackerRank
- **Software Development Certificate** – Microsoft & LinkedIn Learning
- **Software Engineering Virtual Experience** – Goldman Sachs (Forage)

Technical Skills

Languages: Python, C++, Java, JavaScript

Web / Databases: React, Redux, Node.js, .NET, MySQL, MongoDB

Cloud / DevOps: Microsoft Azure, AWS, Git, CI/CD

Other Skills: Data Structures, Algorithms, OOP, DBMS, Operating Systems, Linux, Machine Learning
